

Case Study

Date of Project: May - November 2022
Applicator: Morrison Water Services
Client: Yorkshire Water
Location: Yorkshire, UK
Pipes: 75mm (3") to 150mm (6") Cast Iron
Length Lined: Total 10 kilometers

Project Details

Targeting structural and water quality issues with the existing pipework the use of spray lining on this programme is anticipated to reduce cost and embedded carbon both by up to 60% and reduce the amount of time on site by three quarters (75%).

The reduction in excavation, lifting and plant movement is also safer for operatives on site.
